

EDO

Inspirations

Inspiration for walls

EDO is a product concept consisting of the design of unique wood paneling and wall cladding for domestic and commercial environments.

EDO combines the warmth of wood with ornate patterns that explore dimension, structure, form, light, and the design history of East and West.

We strive to continue the evolution of the trend of combining traditional Japanese arts and crafts with Western design and manufacturing innovation to create carefully selected new products that will stand the test of time and fleeting fashion trends.

Ancient Japanese craftsmen were celebrated for their unique process and distinctive aesthetic. His woodblock prints have become widely recognized as an iconic form of Japanese art. Along with paintings, engravings produced from the 17th century to the 19th century.

Woodblock printing became popular in mainstream Japan during the EDO period, an era it denotes from 1603 to 1868. In the late 19th century, Japanese aesthetics and craftsmanship took hold in Paris, inspiring a movement that would radically transform visual culture. European. The Japanese pattern tradition quickly became one of France's most enduring aesthetic movements. For over 40 years, it has inspired the far reaches of the design world.

This culture morphed into other cultural aesthetic movements of the late 19th and early 20th centuries: Art Nouveau and Art Deco, Modernism, and many more, to this day.

These design trends are often mistakenly thought to have been entirely the creation of Western culture, but in reality it would be impossible without prior exposure to Japanese art and design.

"They have taught us," jeweler Lucien Falize once said of Japanese EDO period design, "the poetry of this world."

JAPANDI

COLLECTION

The EDO Japandi collection reflects the recent trend -Japandi. This new look takes the mid-century modern style of Scandinavian design and combines it with the timeless elegance of a Japanese aesthetic to create a new fusion of style that brings together the best of both worlds. The resulting cleanliness and minimalism give a timeless look that blends nicely with other types of home décor.

JAPANDI

COLLECTION

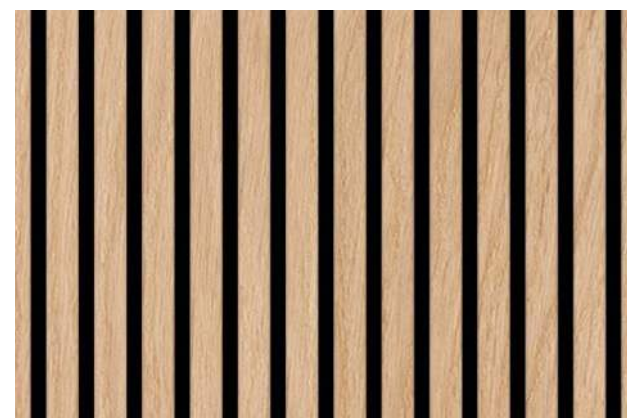

EDO decorative panels offer excellent acoustic properties, being the perfect solution for efficient acoustic absorption, as well as reducing the reverberation time of noise in your space. Ideal for home or commercial use. Manufactured on a mass black MDF board, with a smooth sanded surface, very resistant for use in dry conditions of interior use.

Quick and easy installation that also offers high acoustic absorption.

KUMIKO

COLLECTION

Kumiko is a traditional Japanese technique, made of many wooden bars crossed and placed to form various patterns and expressions. No nails or metal parts are used, and the wooden parts are assembled by adjusting slots and angles. The EDO Kumiko wood panel collection is a modern homage, inspired by this traditional method of pattern construction, but now with the help of modern technology.

NEO ART DECO

COLLECTION

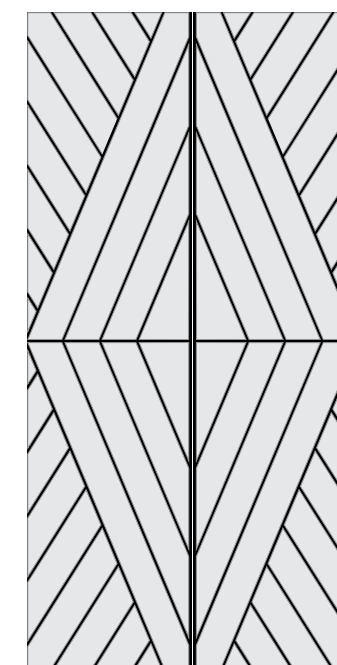

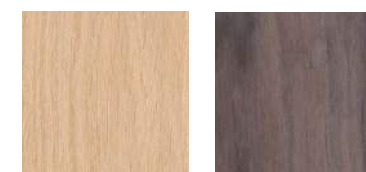

Art Deco is truly timeless and positive in its meaning. As a style of visual arts, architecture, and design, it first appeared in France just before the First World War. Art Deco influenced the design of buildings, furniture, and everyday objects of that time. It combines modern styles with fine craftsmanship and rich materials.

Art Deco represented luxury, glamour, exuberance and faith in social and technological progress. Art Deco is comforting as it shows confidence in a better future. The EDO Neo Art Deco collection offers a historical nod to this era of spirit, progress and brilliance. Although he acknowledges the deep influences of traditional Japanese art forms in the origins of the movement.

Method (A) - "Z" bar hangers :

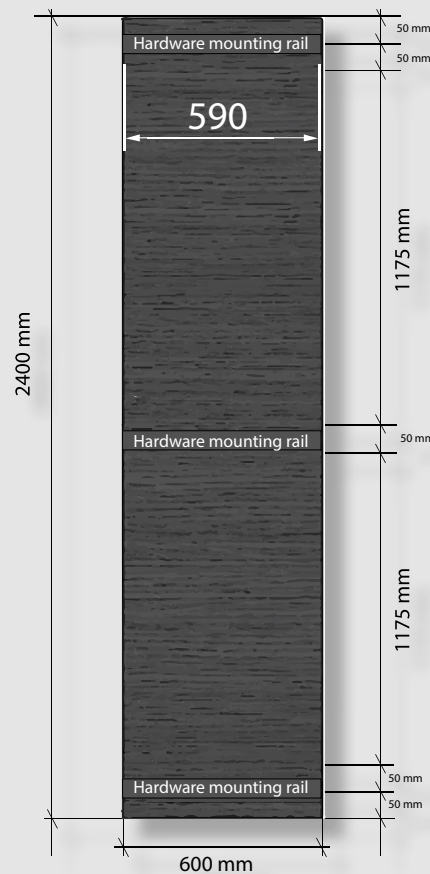

"Z" Bar hanger hardware.
Drop into position / Adjust left, right / Repeat process.

Method (A) - Backside of panel view :

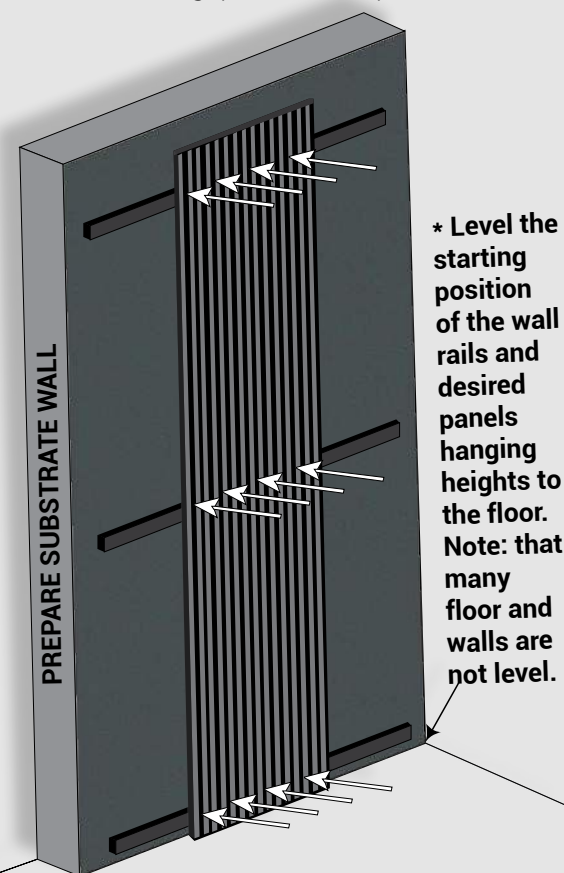

We suggest to install Edo panels with 3 backside 5mm thick mounting rails for hanging or attachment hardware.

The position for the mounting rails can be as in the drawing above.

Method (B) - Screw fix directly to substrate :

* In certain installation situations it is also acceptable and easier to simply screw through the panel face and mounting rails - directly into the substrate, using discreet black screws in the black recessed gaps within the pattern face.

* The suitability of this method depends on the panel pattern style being purchased. It is more difficult with complex patterned style.
